CLINICAL

Lions are from the cat family and very predatory. Their length is about 3 meters with their tail. Their height is approximately 1 meter and their weight is approximately 230 kg. Male lions have manes. That mane gives them a majestic appearance. Manes have setae and durable hair. Their skins are mixture of light brown and yellow. There are some lions that have dark brown color exist less frequently than others. In the pairing season, males fight for lioness. According to the observations, lioness prefer lions with dark hair. Lions are very social animals. Lions who have family, walk together with their packs.

The distinctive roaring of the lion is commonly heard in the evening, before the hunt, or before the dawn. Life stops in the jungle when the lion roars. Hyenas stop roaring leopards stop growling, everyone remain silence and listen to the king.

Because you deserve the best...

DLAclinical

Protects, Purifies

DLA clinical Shampoo

Promotes the growth of strong and healthy hair with natural ingredients and helps to build strong hair roots. The Shea Butter content minimize scalp irritation and prevents itching arising from dryness and Horse Chesnut content improves blood circulation and nourish and revitalize hair follicles. Aminoacid Complexin provides a detox effect and cleanses excess oil gently in the hair and hair scalp and helps to prevent hair loss caused by the increase of dandruff and oil.

Usage: DLAclinical shampoo should be stated to be used after the initially given shampoo is finished after the plantation process. We advice that the patient should wash his/her hair with DLAclinical shampoo once in a day for the first month after plantation. Apply DLAclinical to wet hair by massaging with fingertips. Rinse your hair after it stays a few minutes on your hair. Then, repeat the same procedure several times. Practically, the washing instructions are given to the patient by clinic staff after the plantation day. It is suitable for daily use. Apply DLAclinical Serum product after shampoo in order to achieve an effective result and prevent hair loss. In addition, instructions of washing after plantation are given on the medicine paper delivered by the clinic.

- SLS free
- Paraben free
- SLES free
- pH value 5,5

USAGE: DLAclinical Hair Cocktail is mixed into it before using DLAclinical Shampoo. Both covers are opened. DLAclinical Hair Cocktail is poured into the shampoo. The cap of the shampoo is closed. Then the shampoo bottle

DLA clinical Serum

Supports healthy hair growth and helps to build strong hair roots with intensive Aminoacid complex, Apigenin, Oleanolic acid and Biotinoyl tripeptide-1. This serum helps hair to hold on the skin stronger by making healthy hair roots. Regular application directly on hair helps in strengthening the hair follicles and supports healthy hair growth.

Usage: DLAclinical Serum can be started to be used after one month afterwards the plantation. In the post-plantation process, we recommend that the DLAclinical Serum should be used on a already washed and dried hair for about 4 to 5 times in a week with 3 to 4 minutes massage by your fingertips. Do not rinse please. In order to receive the best results, it is recommended to use DLAclinical Serum up to 1 year after the plantation.
